RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Original publisher: Little Rock, Ark. : U. S. Dept. of the Interior, U. S. Geological Survey ; Denver, Colo. : U. S. Geological Survey, Branch of Information Services distributor, 2003. OCLC Number: (OCoLC)52805990 Subject: Water temperature -- Bull Shoals Lake (Ark. and Mo. ) -- Mathematical models. Excerpt: . . . Chemical Boundary Conditions Most of the relevant hydrodynamic and thermal processes are modeled in CE-QUAL-W2; thus, a time series of concentrations of selected constituents. A few hydraulic and thermal parameters are adjusted at all inflow boundaries is required for model operation. The horizontal eddy viscosity describes turbulent operation. Boundary data for all tributaries and exchange of momentum, and the horizontal eddy diffusion coefficients included dissolved oxygen, ammonia as sivity describes turbulent mixing of mass and heat nitrogen, nitrite plus nitrate as nitrogen, total phosphorus ( table 1 ). Other parameters such as Chezy resistance, roughness, and a conservative tracer concentrations. Because bottom-water heat exchange, bottom temperature, and of the small amount of available water-quality data, wind-sheltering coefficients were discussed previously annual average concentrations were estimated based on ( table 1 ). In general, reservoir models are relatively similar values reported from the White River by Evans insensitive to changes in the horizontal eddy viscosity and others ( 1995 ) and Porter and others ( 1996, 1997 ) and diffusivity. However, the thermal processes are relied and used for all inflow boundary constituents except actively sensitive to changes in bottom-heat exchange dissolved oxygen. Dissolved-oxygen concentrations at and temperature, and the wind-sheltering coefficient. the inflow boundaries were set to the concentration for Sixty-one chemical and biological rate coefficients-100 percent saturation for the given water temperature. coefficients and other parameters are required for the application-Exchange of dissolved oxygen occurs at the cation...
